

ABOUT

X500 EnviroPeat Spill Absorbent

Enviropeat is a highly economical and environmentally friendly granular absorbent, perfect for the cleanup of all hydrocarbon spills on both sealed and unsealed surfaces. Contains naturally occurring bacteria within the peat which break down hydrocarbons over time.

Ideal for spills on gravel, dirt or rough surfaces as it penetrates small spaces. Huge capacity to absorb up to five times its weight. Gentle on the environment, the peat will biodegrade hydrocarbons and contaminants, returning the spill site back to its natural state. Its powerful wicking action instantly prevents liquid from leaching back out. Save on disposal time and cost, it can be incinerated or disposed of at landfills (according to local regulations).

Used for absorbing all hydrocarbons including oils, fuels, diesels, hydraulic fluids, paints, and solvents. Extremely water repellent (hydrophobic) so can be used to recover spills on water, or on land in wet conditions.

IDEAL FOR:

- Fuel Stations
- Petrochemical Industry
- Vehicle Accident Clean-up
- Workshops
- Oil Refineries
- Airports & Shipping Ports

FEATURES:

- Economical and versatile absorbent for hydrocarbon liquid spills
- Capacity to absorb up to 5 times its weight
- Powerful wicking action instantly prevents liquid from leaching back out
- Hydrophobic (water repellent) properties make it suitable for hydrocarbon spills on land and on the water.
