

ABOUT

240 Litre Wheeled Bin Standard Spill Kit

The 240L Standard Wheeled Bin Spill Kit provides a comprehensive solution for responding to larger spills across workshops, warehouses, factories, transport depots, laboratories and industrial workplaces. Designed for strategic placement around the worksite, it contains a complete range of absorbents and spill response accessories to help quickly contain, recover and clean up spilled liquids.

Packed in a durable 240L wheeled bin, the kit can be positioned in key spill risk areas and quickly transported to the spill location when required. A combination of absorbent socks helps contain spills and protect nearby drains, while absorbent pads and cushions recover pooled liquid. The included granular absorbent supports effective clean-up on both sealed surfaces such as concrete and asphalt, and unsealed surfaces including gravel and dirt. A brush and shovel assist with collecting used absorbents and granular material, while gloves and waste disposal accessories support safe clean-up and disposal.

Available in General Purpose, Oil & Fuel and Chemical configurations, with absorbents selected to suit the liquids and hazards associated with each application. Replacement refill kits are also available, allowing used absorbents and consumables to be replenished while reusing the existing wheeled bin.

Kit Contents
